

Information Pools and Insider Trading: A Snapshot of America's Financial Elite

A. Didisheim, L. Somoza

Swiss Finance Institute - University of Lausanne

luciano.somoza@unil.ch

January 2022

Motivation

- ▶ Hedge funds managers are a foremost example of economic elite.
- ▶ Previous literature showed the importance of personal networks on investment decisions (see, e.g., Cohen, Frazzini, and Malloy, 2008, 2010).

Research question

- ▶ Is there an elite informational factor driving a manager's performance?

Executive summary

- ▶ We measure co-movements in returns among groups of alumni.

Executive summary

- ▶ We measure co-movements in returns among groups of alumni.
- ▶ Correlations between alumni of top universities are significantly higher than others.

Executive summary

- ▶ We measure co-movements in returns among groups of alumni.
- ▶ Correlations between alumni of top universities are significantly higher than others.
- ▶ We link this factor to information pools using an insider trading scandal as a quasi-natural experiment.

Executive summary

- ▶ We measure co-movements in returns among groups of alumni.
- ▶ Correlations between alumni of top universities are significantly higher than others.
- ▶ We link this factor to information pools using an insider trading scandal as a quasi-natural experiment.
- ▶ We document that an elite education is linked with a higher AUM at fund launch.

Biographies

Example of biography:

*Uncle Scrooge is an Executive Vice President of McDuck Fund, a position he has held since 1994. From 1981 to 1989, Mr. Scrooge headed the high yield bond departments (including sales, trading and acting as Director of Research) at Prudential Securities (1981 to 1983), Lehman (1983 to 1988) and Barney Harris (1988 to 1990). In these positions, Mr. Scrooge was responsible for the investment of hundreds of millions of U.S. Dollars of each firm's capital in high yield securities and for pricing and marketing approximately USD1.0 billion of new issue high yield bonds. From 1990 to 1994, Mr. Scrooge was a Senior Salesman in the High Yield Bond Department of Alex Brown. Mr. Scrooge holds an MBA from The Wharton School of the **University of Pennsylvania**.*

- 5 Fund raising
- 6 Conclusion

Looking for co-movements

$$y_t = X_t a + \epsilon_t \quad (1)$$

- ▶ X_i is the vector with the Fung (2001) seven factors.
- ▶ We create a time serie for each university by computing the average of its alumni residuals.

Correlation between alumni groups

A snapshot of America's Financial Elite

What are we capturing?

Geographic effect?

- ▶ Geography should be marginal, as it should not be limited to elite schools.

What are we capturing?

Geographic effect?

- ▶ Geography should be marginal, as it should not be limited to elite schools.

Investment style?

- ▶ The seven hedge fund factors should capture the investment style.

What are we capturing?

Geographic effect?

- ▶ Geography should be marginal, as it should not be limited to elite schools.

Investment style?

- ▶ The seven hedge fund factors should capture the investment style.

A social phenomenon?

- ▶ Social interactions could shape the network.

Table of Content

- 3 Galleon Capital scandal**
- 4 Main results
- 5 Fund raising
- 6 Conclusion

Main events

- ▶ Galleon Capital was a New York-based hedge fund, founded by Raj Rajaratnam. In 2008, it had approx USD 7bn AUM.

Main events

- ▶ Galleon Capital was a New York-based hedge fund, founded by Raj Rajaratnam. In 2008, it had approx USD 7bn AUM.
- ▶ In October 2009, Mr. Rajaratnam, was arrested and charged with insider trading.

Main events

- ▶ Galleon Capital was a New York-based hedge fund, founded by Raj Rajaratnam. In 2008, it had approx USD 7bn AUM.
- ▶ In October 2009, Mr. Rajaratnam, was arrested and charged with insider trading.
- ▶ According to prosecutors, he earned USD 63.8 million through insider trading in stocks such eBay, Goldman Sachs, and Google.

Main events

- ▶ Galleon Capital was a New York-based hedge fund, founded by Raj Rajaratnam. In 2008, it had approx USD 7bn AUM.
- ▶ In October 2009, Mr. Rajaratnam, was arrested and charged with insider trading.
- ▶ According to prosecutors, he earned USD 63.8 million through insider trading in stocks such eBay, Goldman Sachs, and Google.
- ▶ He was convicted in May 2011 on nine counts of securities fraud and five counts of conspiracy to 11 years of prison.

Main events

- ▶ Galleon Capital was a New York-based hedge fund, founded by Raj Rajaratnam. In 2008, it had approx USD 7bn AUM.
- ▶ In October 2009, Mr. Rajaratnam, was arrested and charged with insider trading.
- ▶ According to prosecutors, he earned USD 63.8 million through insider trading in stocks such as eBay, Goldman Sachs, and Google.
- ▶ He was convicted in May 2011 on nine counts of securities fraud and five counts of conspiracy to 11 years of prison.
- ▶ Mr. Rajaratnam obtained an M.B.A. from the Wharton School of the University of Pennsylvania and was resident in Greenwich (CT).

A shock on information sharing?

“what is really worth noting is the unprecedented - and extensive - use of (...) methods so beloved of Hollywood vice-and-action movies”

G. Robinson (2009, Oct 19), Financial Times - Alphaville.

“wire taps are more typically used against the mob or terrorists. The U.S. attorney’s implication is that Wall Street ought to watch out because prosecutors are now treating hedge funds like the mafia.”

The Wall Street Journal editorial Board (2009, Oct 18)

Unprecedented and unexpected

Figure: Google searches for *hedge fund insider trading*

Table of Content

- 4 Main results**
- 5 Fund raising
- 6 Conclusion

Relevance and exclusion condition

Relevance condition

The media sensation and the unprecedented investigation methods could have plausibly altered common information-sharing practices

Relevance and exclusion condition

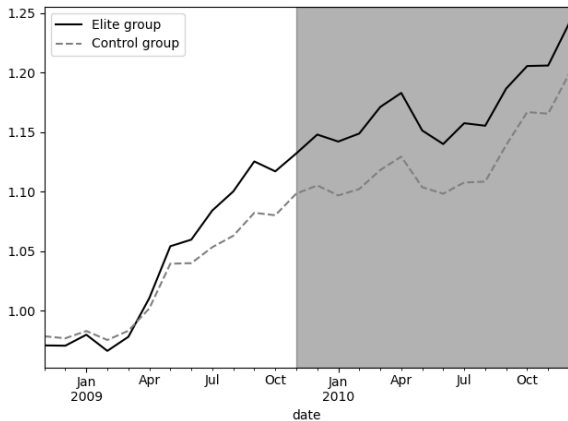

Relevance condition

The media sensation and the unprecedented investigation methods could have plausibly altered common information-sharing practices

Exclusion condition

The scandal was an isolated criminal investigation with no concrete consequences for those not directly affected

Parallel trend

Main regression

$$y_{i,t} = \alpha + \beta_1 \textit{after} + \beta_2 \textit{penn} + \beta_3 (\textit{after} \times \textit{penn}) + X'_{i,t} \beta + \epsilon_{i,t}. \quad (2)$$

Where:

- ▶ $y_{i,t}$ is the return of fund i in month t
- ▶ *after* is a binary variable equal to 1 if the observation is after the scandal
- ▶ *penn* is a binary variable equal to 1 if the fund's manager belongs to the treated network, as defined in the previous section
- ▶ $X_{i,t}$ is a vector of controls which include Fama (2015) five factors and US area fixed effects.

AUM at fund launch

$$\log(AUM_i) = \alpha + \beta_1 ivy + \beta_2 year_{exp} + \beta_3 I_{exp} + \beta_4 SR_{exp} + FE + \epsilon_i, \quad (3)$$

Where:

- ▶ ivy is a binary variable equal to 1 if at least one fund manager has an ivy-league degree
- ▶ I_{exp} is a binary variable equal to 1 if the managers already managed a hedge fund before fund i
- ▶ $year_{exp}$ indicates the number of years between the date when fund i is open, and the first date in which the manager appears in our database
- ▶ SR_{exp} represents the mean sharp ratio estimated across all funds under the same manager as fund's i before the launch of fund i

Conclusion

- ▶ The average correlation between top universities alumni groups is significantly higher than the one between the others

Conclusion

- ▶ The average correlation between top universities alumni groups is significantly higher than the one between the others
- ▶ By using the Galleon Capital insider trading scandal as an exogenous shock, we take steps towards linking this structure to information sharing.

Conclusion

- ▶ The average correlation between top universities alumni groups is significantly higher than the one between the others
- ▶ By using the Galleon Capital insider trading scandal as an exogenous shock, we take steps towards linking this structure to information sharing.
- ▶ Consistent with the existence of an elite information pool, we observe that an Ivy education is associated with 55.3% more AUM at fund launch
